Raisin	Chocolate Kiss	Sunny Spice Cheek Color
--------	----------------	-------------------------

1. Highlight shade: Apply across the brow bone and on the lid.
2. Midtone shade: Start from the outside corner of the eyelid, because the first place you lay your brush gets the most color. Gently move your brush across the crease into the inside corner of the eyelid. Also brush it along the lower lash line, once again starting from the outside corner and brushing toward the inside so that the most intense color is at the outside, fading as you move to the inside corner. This will help you create subtle definition.
3. Contour shade: Apply across your upper lash line from the outside corner inward. Then bring the color up into the outer portion of the crease and blend it inward about 1/3 of the way, layering it on top of your midtone shade. Sweep color underneath the lower lash line for a soft, blended look.
